

- No appointment necessary
- Instant results available for On-Site testing
- All results are confidential
- All On-site tests are monitored

## Testing Details

**Drug Testing**, whether performed in a laboratory or in the home, has an approximate 5% false positive error rate. A positive test result from a drug test therefore, is a strong indication, but not an absolute guarantee that drugs are present.

**Drug Testing** is often considered to be the first step in a two-step process analyzing urine for drugs of abuse. If the initial drug test is positive, the urine sample can be sent to a **SAMSHA** certified laboratory for confirmation testing. A **GC/MS** confirmation is considered to be the “gold standard” in the drug testing industry and is virtually 100% accurate.
